HOGAR

smarHOME

For Halia, home is something more than a house, something more than an inhabited place. It's where we live, and we like to feel comfortable, safe and calm.

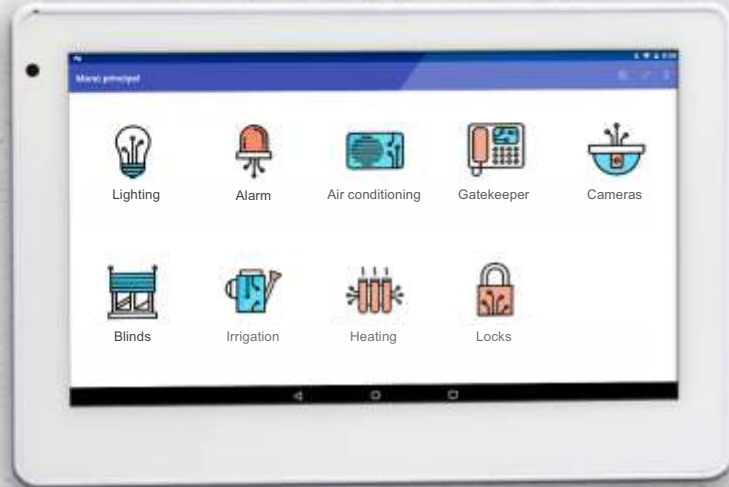

Halia aware of the needs of people, provides technological solutions that improve the quality of life in homes, providing solutions.

Halia smarHOME has avant-garde technology so that the day to day in your home is an experience for you and your family.

Intuitively controls lights, music, heating, blinds, doors and the security system.

Responds intelligently according to their schedules and needs.

INNOVATIVE

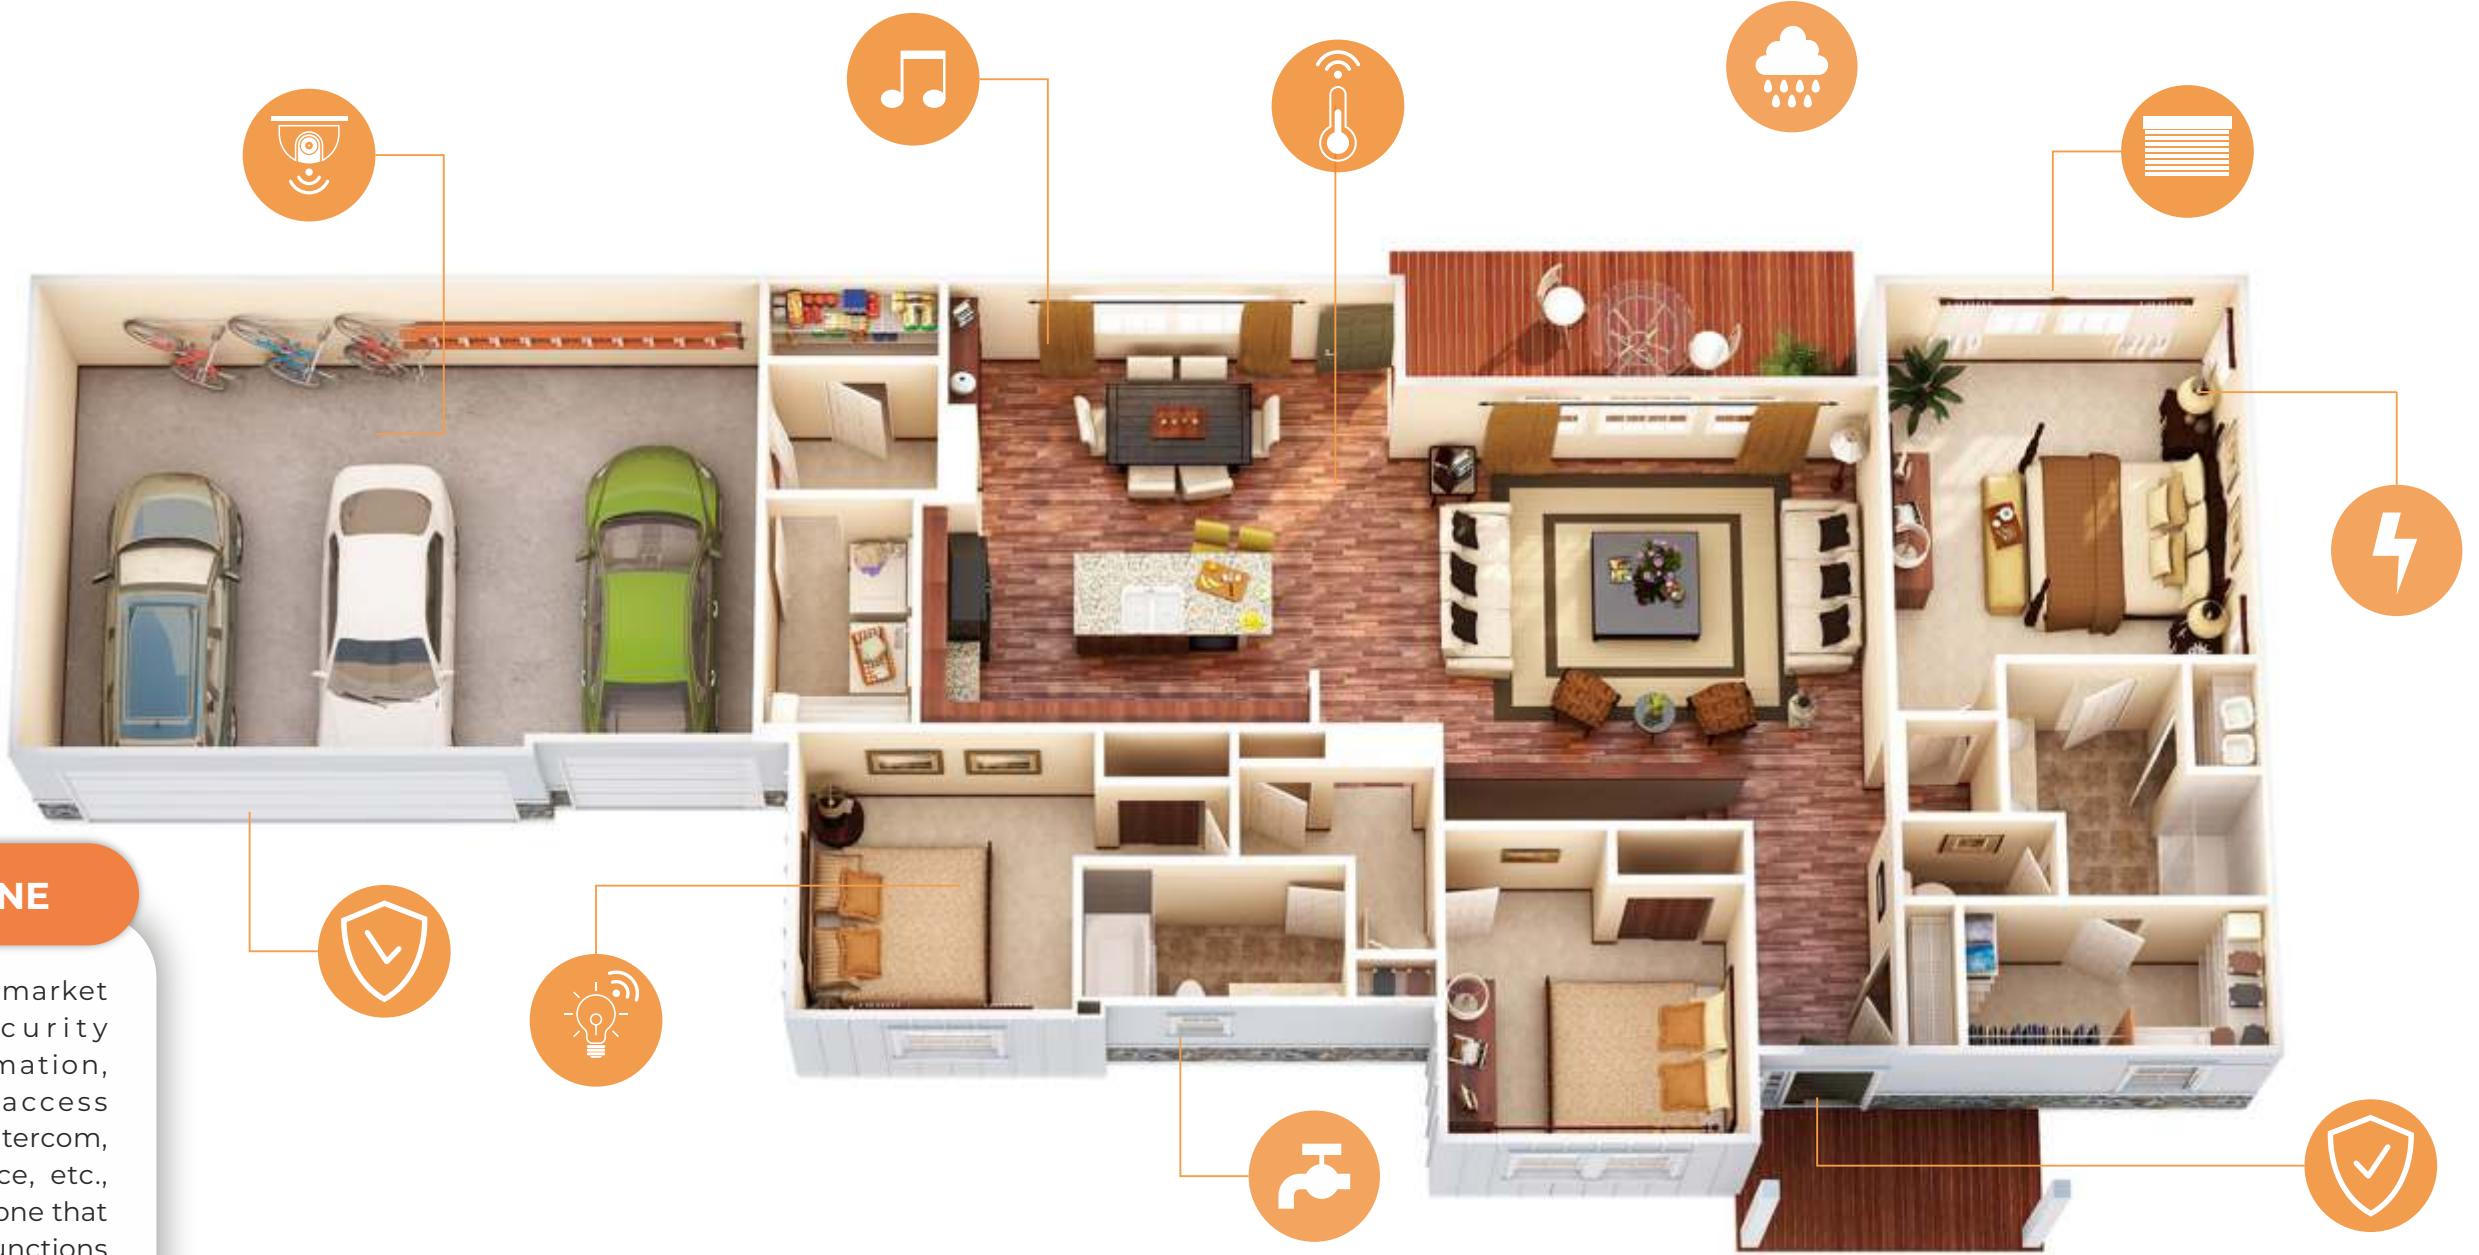

We use the latest technologies to develop the HALIA system, getting a modern and current system that allows us to use all functions from a mobile phone or a tablet.

ACCESSIBLE

By integrating all functions in a single system, it's very easy to use since we will have a single application.

ALL IN ONE

In the current market there are security systems, automation, time control, access control, video intercom, video surveillance, etc., but there is only one that integrates the functions of all of them in one, the HALIASYSTEM.

FLEXIBLE

Thanks to its powerful Hardware and Software, the HALIA system easily adapts to any functionality that requires even the most demanding of users.

HOME SECURITY OR COMPANY

Halia incorporates a powerful intrusion security system controllable by mobile devices and with Artificial Intelligence that allows the system to make decisions. For example, turning off all the lights and lower all the blinds when connecting the intrusion alarm. It can also restrict access to certain access doors, restrict any user from disconnecting the alarm in certain areas or at certain times.

TIME AND ACCESS CONTROL

It allows you to manage your accesses by users, zones and time segments. In an intuitive and visual way to have total control.

TECHNICAL SAFETY

In case of a gas leak, a flood, or a fire, the system will notify you with a call to your mobile phone or to your central alarm receiver. In addition, the system may previously act to avoid major problems by closing the gas or water supply.

EXCLUSIVE

The HALIA system is not just another product, it is developed with the highest quality standards. An example of this is that the security function complies with the same regulations required for banks and jewelries.

LIGHTING, HEATING INTELLIGENT AND EFFICIENT

The sensors give information about the interior and exterior light of the house. Activated either by movement, by lighting conditions, by previous programming or simply by user action.

PRESENCE SIMULATION

A good security system should also be preventive. You can simulate presence in your home when you are absent daily or on vacation. Automatically collecting life lights and equipment you want while you are not at home.

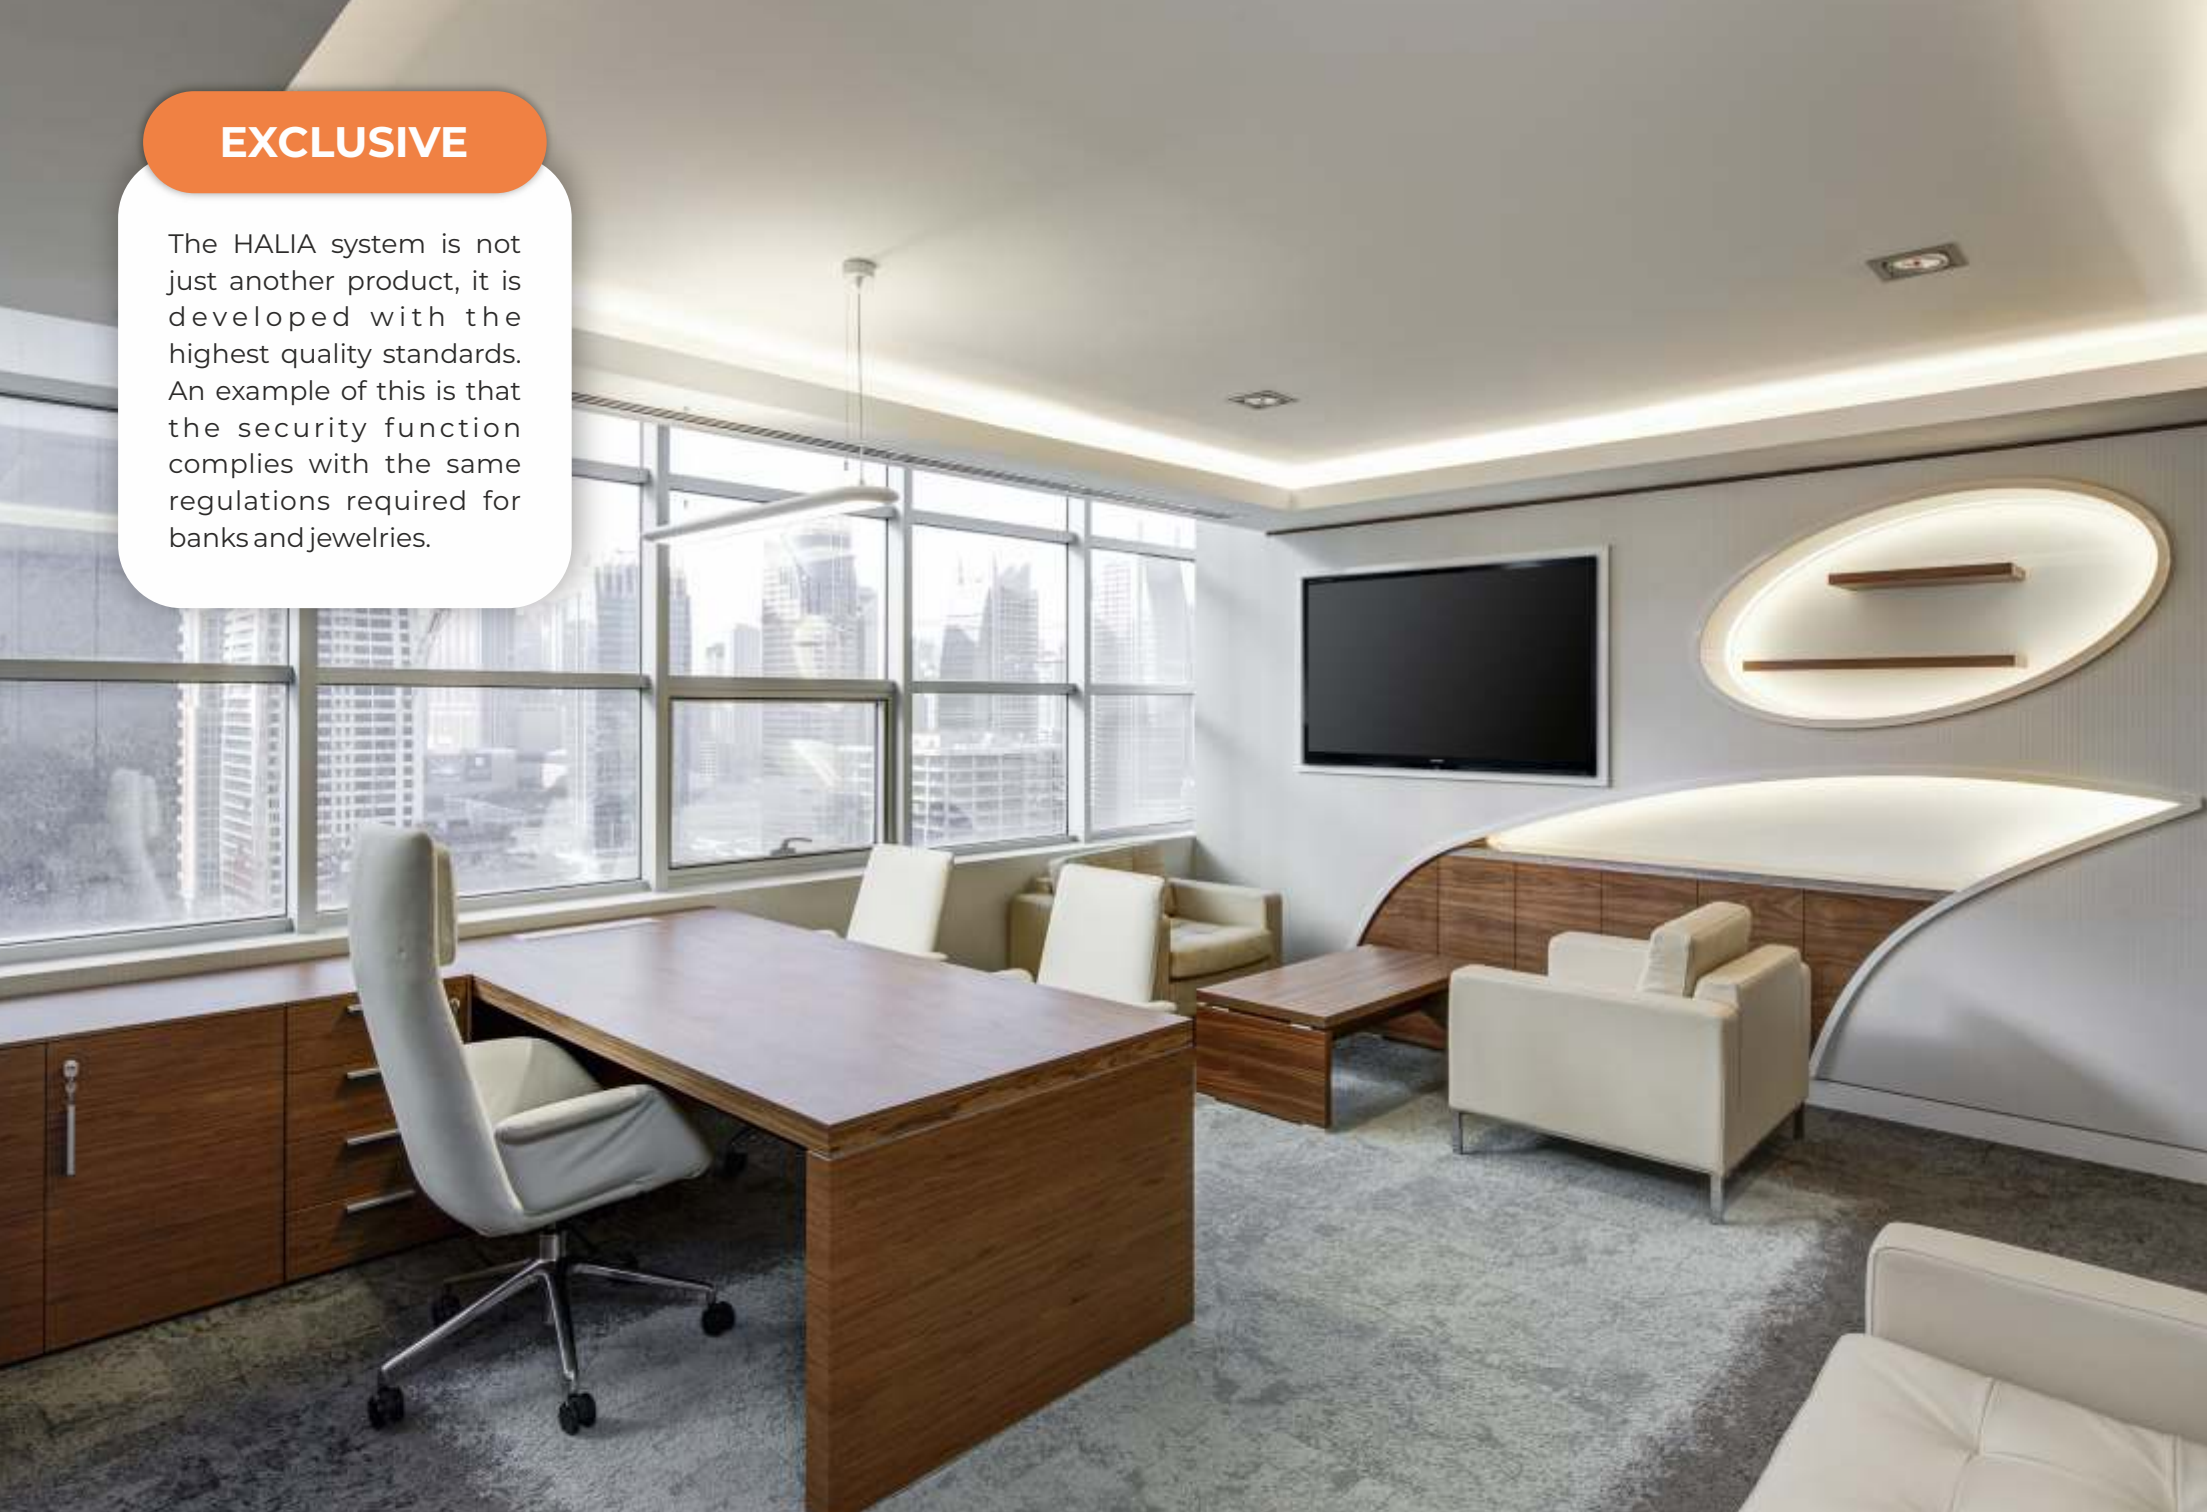

CONTROL AND REMOTE MONITORING

Real-time monitoring allows you to make decisions about safety, comfort or entertainment. From any mobile device with internet access and from any location. supervise heating, irrigation, lights, surveillance cameras, etc.

Example:

Turn on the heating on the way, so that your house is at the right temperature.

Water the garden, or remotely give access to people authorized by you.

We are an innovative company with its own **R + D** department, which oversees the manufacture, distribution and installation of all its products.

Offering their clients, a Home where they can feel comfortable, safe and calm.

A technological orchestra, aimed at a lifestyle, inspired by ideas that promise more comfort, ease and tranquility to our customers. We are constantly looking for a way to lead a smarter lifestyle.

We partner with highly qualified system designers and installers, who share our vision and passion for a smarter lifestyle.

By sharing with them how you want to live, you can adapt our solutions to help you create the smart home of your dreams.

WHY HALIA SMARTHOME?

Halia designs, develops and markets security and automation systems that improve the quality of life of people in their homes and businesses, by providing technological solutions.

We intend to be a reference in the quality and design of their products and in the transparency and support in the process of their implementation.

COMPATIBILITY

We develop our products within the established standards making them compatible with the leading brands in the industry.

We integrate everything so that the end user is the beneficiary.

COMMERCIAL NETWORK

Halia takes special care of the commercial network to guarantee a correct installation and after-sales service of all its products, endorsing to companies and installers to guarantee a national and international distribution network

Any device will always be installed by a professional trained by Halia.
